

32.7

Datos

$$B = 1.25 \mu\text{T}$$

$$\lambda = 432 \text{ nm}$$

f - s

 $E_{\text{max}} - \text{V}$  $E(x, t)$  $B(x, t)$ 

Como es una onda electromagnética su velocidad de propagación es  $v = 3 \cdot 10^8 \text{ m/s}$

$$\text{Como } v = \lambda f \Rightarrow f = \frac{v}{\lambda} = \frac{3 \cdot 10^8}{432 \cdot 10^{-9}}$$

$$f = 0.00697 \cdot 10^{17} \text{ Hz} = 694 \cdot 10^{12} \text{ Hz}$$

$$E_{\text{max}} = c B_{\text{max}} = (3 \cdot 10^8) (1.25 \cdot 10^{-6}) = 375 \text{ V/m}$$

$$k = \frac{2\pi}{\lambda} = \frac{2(3.14)}{432 \cdot 10^{-9}} = 0.0145 \cdot 10^9 \text{ rad/m} = 145 \cdot 10^5 \text{ rad/m}$$

$$\omega = 2\pi f = (2)(3.14)(694 \cdot 10^{12}) = 4.36 \cdot 10^{15} \text{ rad/s}$$

$$E(x, t) = 375 \cos(145 \cdot 10^5 x - 4.36 \cdot 10^{15} t)$$

$$B(x, t) = 1.25 \cdot 10^{-6} \cos(145 \cdot 10^5 x - 4.36 \cdot 10^{15} t)$$
