Datos

$$E_0 = 3.2 \cdot 10^5 \text{ V/m} \quad \text{Según la ley de Gauss}$$

$$E_f = 2.5 \cdot 10^5 \text{ V/m} \quad E_0 = \frac{\sigma}{\epsilon_0} \quad \text{de donde}$$

 $\sigma - s$ $\sigma_i - s$

$$\sigma = E_0 \epsilon_0$$

$$\sigma = (3.2 \cdot 10^5)(8.8 \cdot 10^{-12}) = 2.8 \cdot 10^{-6} \text{ C/m}^2$$

 $k - s$

$$\sigma_i = \sigma \left(1 - \frac{1}{k}\right) \quad \text{Pero es necesario tener } k.$$

$$\frac{E_0}{E_f} = k = \frac{3.2 \cdot 10^5}{2.5 \cdot 10^5} = 1.28$$

$$\sigma_i = 2.8 \cdot 10^{-6} \left(1 - \frac{1}{1.28}\right) = 6.2 \cdot 10^{-7}$$
